1 Welcome screen:

1.0.1 design:

```
Welcome to DeepInfer model registry. This wizard will walk you through creating a JSON
file which can be used to register your model in DeepInfer model cloud. At the end of
the wizard, save the file and submit a pull request along with your JSON file at the
model registry repository at          https //github.com/DeepInfer/Model Registry
```

```
                    Exit                          Next
```
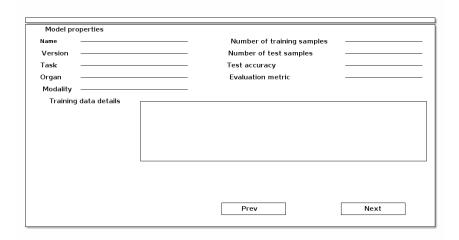

2 Model properties:

2.0.2 name

2.0.3 version

2.0.4 task

2.0.5 organ

2.0.6 modality

2.0.7 training data details

2.0.8 description

2.0.9 detailed description

2.0.10 train:

1. number of subjects

2.0.11 test:

1. number of subjects

2. accuracy

3. metric

2.0.12 design:

Model properties

Name		Number of training samples	
Version		Number of test samples	
Task		Test accuracy	
Organ		Evaluation metric	
Modality			

Training data details
